

Supervisory visit by Räddningstjänsten Syd

Räddningstjänsten Syd paid us a supervisory visit on March 13 according to law (2003:778) on protection against accidents.

The focus during the visit was on our systematic fire protection work. The inspector from Räddningstjänsten Syd reviewed the fire protection in the garage and in our basement storage as well as inspected smoke hatches and fire gas ventilation in the staircases.

The inspector emphasized how important it is to keep flammable material away from our staircases. Staircases are our primary escape routes. The staircase should be free from strollers, bicycles, cartons and other things. It reduces the risk of fire spreading in the staircase and it will facilitate evacuation and the rescue service's efforts.

Strollers must not be kept on the staircases. They should be placed in the stroller room in the basement (or inside the apartment).
